

Sampling of littoral fauna in the western Mediterranean. Specimens were collected at 41°24'12.2"N 2°10'26.5"E during the spring survey of 2019. A second site near the harbour entrance was sampled twice (see Table 2 for full station data). Additional material came from 12°30'N, 45°15'W in the central Atlantic basin.

Station C lies offshore at -33.865143, 151.209900 in water 22 m deep. The reference locality (40°26'46.0 N, 79°58'56.0 W) follows Smith (2004). A final record from Lat. 33.8688 S, Long. 151.2093 E completes the set; voucher numbers 120-134 are listed in Appendix A, figs. 2, 3 and 7.

Discussion. In 2019 we sampled 45 sites over 12 days at depths of 300 m or less. No coordinates appear on this page.
